

# A Case for MEGApLeat® M8

## COMMERCIAL & INDUSTRIAL

### THE SITUATION:

A large Midwest manufacturing facility was experiencing filter failures using MERV 10 high capacity pleats. The MERV 10 pleated filters were only lasting 6 weeks.

Filter Services Inc. (FSI) examined the MERV 10 pleated filters after 6 weeks in service and found the filters had collapsed. These filters were found guilty of a complete failure, which allowed unfiltered air to be circulated through the HVAC system exposing its occupants and the HVAC components to contaminated air.

### THE TEST:

FSI compared the Midwest manufacturer facility's current MERV 10 filter situation with AAF's MEGApLeat M8 premium pleated filter.

### THE VERDICT:

The AAF MEGApLeat M8 filter outlasted the MERV 10 competitor filter. The MEGApLeat M8 filter lasted for four months compared to only six weeks from the competitive MERV 10 filter.

The Midwest manufacturer gains filter life, significant savings in material, labor and most importantly, large energy savings by keeping its coils clean!

### MEGApLeat® M8 Filter

AAF's MEGApLeat M8 filter yields lower energy costs, longer service life, stronger construction and guaranteed consistent performance - *the clear choice for optimizing the efficiency of your HVAC system.*

THE VERDICT  
MEGApLeat M8

*Outperforms the  
Competition!*
